

ISR ISR-14008

Add unowned item to space - Design

▼ Details

Type:	Improvement	Status:	DONE (View Workflow)
Priority:	Medium	Resolution:	Done
Affects Version/s:	None	Fix Version/s:	2005.0.0
Component/s:	ISRI Core		
Labels:	<div>ApprovedCxS&Q-5NotWarrantyReadySysEngClarify</div>		
ISRI Owner:	Software Team - D&I, Octo - D&I		
ISRI Category:	Design		
ISRI Justification:	Users need to know that items added to a space may not be visible to space members		
ISRI Environment:	Leidos Connect		
ISRI Completion Criteria:	A Design confluence page is provided with mockups and suggested implementation tickets that will improve the user's experience when adding unowned items to a space		
ISRI Github Link:	N/A		
ISRI Technology:	DDF Core		
Sprint:	Octo D&I - Sprint 23 (PI4 S4)		

▼ Description

Currently if a user adds an item to a space that they do not own (ie only have can view or can edit permissions on the item), they are not able to modify the items permissions, and therefore cannot give the space access to the item. Because of this, no members of the space will be able to see the item (unless they have direct individual or group access specified). In order for space members to see the item, the owner of the item would need to "Manage Access" and grant the space permissions. This may not be possible in some cases where the owner of the item does not have access to the space the non-owner is attempting to add the item to.

Currently, the "Add to Space" dialog tells the user that they are adding "X owned items, X unowned items" to the space and nothing more. The proposal is to make it more clear to the user that adding unowned items will have complications. Some options include:

- notify the user that the unowned items will not be visible to space members - proceed anyway?
- Prompt the user duplicate the item, then add the duplicated item to the space
- Provide a "Duplicate and Add to space" space button
- Send item owner(s) a "request space access" notification
- etc

Once a "workaround" is implemented should the user be prevented from adding unowned items to the space altogether?

I think sending out a request to the item owner is the way to go.

Once the request is completed, another notification should help the initial requestor follow-up.

Owner has given you *access level* (Should this only be "Owns"?).

You may now add it to *space name*. (Could this leak information if their access is revoked?)

Action: Add Item to Space

This will have to check to make sure you still have access to both the item and the Space, with a toast message letting the user know if something no longer has access.

▼  [Neil Garland](#) added a comment - 07/Jul/23 7:54 PM - **edited**

Only the owner should be able to change access permissions. This does not affect source products only uploads. Hence I agree with Kyle that the best approach is to inform the user and owner. The owner can give permission to the Space or the user. Alternative, do not allow the operation.

[Suchi Goyal](#) to check with [trent.spencer](#) on Connexa's comments above and see that is what Trent wants.

[Suchi Goyal](#) Suggested "**ISRI Completion Criteria**" to be updated on this ticket and presented at the demo:

A Design confluence page is provided with mockups and suggested implementation tickets that will improve the user's experience when adding unowned items to a space
